

STOP DINING THEFT

WHY PANOPTYC?

Leading dining operators like Compass Group and Aramark come to Panoptyc to cut theft and increase sales by millions of dollars every year

Theft at dining locations ranges from 8% to 14% on average, leading to tens of thousands of dollars in lost revenue per location per year

Dining operators are frustrated with spending countless hours reviewing footage for theft and are tired of clunky camera systems that don't give leadership teams visibility into the quality of field operations

01 Reduce Self-Checkout and Cashier Theft

Panoptyc's AI flags walkouts, unscanned items, cash theft, cashiers giving away products, and suspicious kiosk interactions. Weekly reports give dining operators the evidence they need to get action taken against potential theft

02 Increase Sales

After end clients take action against theft, sites often see a sales increase. Word spreads that theft will not be tolerated in the cafeteria and those who were previously stealing start to pay for their items

03 Stay Open 24/7

Panoptyc's AI loss prevention gives dining operators the confidence and profitability to stay open 24/7 without fear of runaway theft

04 Improve Account Retention and Satisfaction

Identifying and addressing theft with Panoptyc can help avoid subsidies or other added costs for shrink, as well as having to remove high theft items from planograms that customers want. Panoptyc helps keep shelves stocked and customers happy.

CLIENT TESTIMONIAL

“Panoptyc has been a tremendous help in managing leakage in the café where it's installed. At one of our client locations, repeat offenders dropped from eight in a single month to zero the following month. The Panoptyc team makes it easy for my managers to stay on top of things and succeed. We've seen real results, and I couldn't be more pleased with the impact.”

Josef Huber,
District Manager, Eurest Dining Services

SOLUTIONS

Checkout Detective

- AI loss prevention software detects suspicious behavior and theft through people tracking, item tracking, and point-of-sale data analysis
- Sends weekly reports of theft uncovered in your store along with supporting video and transaction evidence

Cashier Detective

- AI software that catches cashier theft and sends reports weekly
- Detects objects, hand movements, and point-of-sale mismatches. For example cash or product movement without a purchase
- Sends weekly reports of theft uncovered in your store along with supporting video and transaction evidence

Cafe Viewer

- Panoptyc's camera system allows for easy remote viewing on mobile and the web across thousands of cameras
- Easy installation, custom storage, complies with government contract requirements with low data consumption
- Options to use Panoptyc's camera system or the site's existing camera system
